LISTING OF CLAIMS:

The listing of claims will replace all prior versions, and listings of claims, in this application.

Listing of Claims:

a permeable fabric forming an inflatable figure with a hollow body;

an interchangeable fan assembly for continuously-blowing air into said hollow

body, said fan assembly comprising at least one fan, a housing for said fan secured to a

standard-sized fabric having a male securing device disposed along a border of said standard-

1. (Currently Amended) A cold-air inflatable display comprising:

sized fabric for receipt by a female securing device disposed along a border of a receiving

opening joining said fan assembly to said permeable fabric through said receiving opening

positioned on said hollow body above a surface-touching bottom to allow optimum airflow

through said fan into said hollow body;

a lighting arrangement extending through an interior portion of said hollow

body, comprising a power cord, at least one light fixture, including a light bulb with a

protective cover, secured to said power cord and an electrical connector disposed at an end of

said power cord mating with a second electrical connector extending from said fan assembly;

and

a second power cord extending from said fan for connection to a power source;

wherein said interchangeable fan assembly is a lightweight assembly secured

to said permeable fabric configured to be elevated above said surface-touching bottom of said

hollow body without a base support and without distorting said figure when said cold-air

inflatable display is inflated.

- 2 -

- 2. (original) The cold-air inflatable display of claim 1, further comprising three fans.
- 3. (original) The cold-air inflatable display of claim 1, wherein said receiving opening has the same dimensions as the corresponding dimensions of said fan assembly.
- 4. (original) The cold-air inflatable display of claim 1, further comprising a zipper system having a male securing zipper and a female securing zipper for joining said fan assembly to said permeable fabric.
 - 5. (canceled).
- 6. (original) The cold-air inflatable display of claim 1, further comprising a fastening frame for securing said housing of said fan to said standard-sized fabric.
 - 7. (Currently amended) A cold-air inflatable display, comprising:
 a permeable fabric forming an inflatable figure with a hollow body;
 an interchangeable fan assembly for continuously-blowing air into said hollow

body, said fan assembly comprising at least one fan, a housing for said fan, a securing device disposed along a border of said housing for joining said fan assembly to said permeable fabric through a receiving opening positioned on said hollow body above a surface-touching bottom of said hollow body; and

a lighting arrangement extending through an interior portion of said hollow body, comprising a power cord connected to said fan and at least one lighting element secured to said power cord[[.]];

wherein said interchangeable fan assembly is a lightweight assembly secured to said permeable fabric configured to be elevated above said surface-touching bottom of said

hollow body without a base support and without distorting said figure when said cold-air inflatable display is inflated.

- 8. (original) The cold-air inflatable display of claim 7, further comprising an electrical connector disposed at an end of said power cord mating with a second electrical connector extending from said fan assembly.
- 9. (original) The cold-air inflatable display of claim 7, further comprising three fans.
- 10. (original) The cold-air inflatable display of claim 7, wherein said receiving opening has the same dimensions as the corresponding dimensions of said fan assembly.
- 11. (original) The cold-air inflatable display of claim 7, further comprising a zipper system having a male securing zipper and female securing zipper for joining said fan assembly to said permeable fabric.
- 12. (original) The cold-air inflatable display of claim 7, further comprising a fastening frame for securing said housing of said fan to said standard-sized fabric.
- 13. (Currently amended) A method for interchanging a fan assembly for coldair inflatable displays, comprising:

unfastening a border of an interchangeable fan assembly from a permeable fabric along a receiving opening positioned on a first cold-air inflatable display above a surface-touching bottom of said display, said interchangeable fan assembly is a lightweight assembly secured to said permeable fabric configured to be elevated above said surface-touching bottom without a base support and without distorting said first cold-air inflatable display when said first cold-air inflatable display is inflated;

removing an electrical connector extending from a fan of said interchangeable fan assembly from a second electrical connector of a power cord of a lighting arrangement of said first cold-air inflatable display;

connecting said electrical connector to a second power cord of a second lighting arrangement of a second cold-air inflatable display; and

fastening said border of said interchangeable fan assembly to a second permeable fabric along a second receiving opening positioned on said second cold-air inflatable display above a surface-touching bottom of said display, said interchangeable fan assembly is a lightweight assembly secured to said second permeable fabric configured to be elevated above said surface-touching bottom without a base support and without distorting said second cold-air inflatable display when said second cold-air inflatable display is inflated.

14. (original) The method of claim 13, wherein said unfastening step comprises unzipping a male securing zipper from a female securing zipper along said receiving opening and said fastening step comprises zipping said male securing zipper together with a second female securing zipper along a second receiving opening.
